

Attachment to Application Septic System for a Business Site

The sizing of a septic system for a business is figured differently than for a house. As a result some additional information is required. The amount of water used at a facility has an effect on how the septic system works. The system needs to be sized to handle the highest flow coming from the facility. Please provide the following information that pertains to your specific business and return it along with your application.

How many shifts per day? _____

Number of employees per shift? _____

How many members, students or residents does the group have? _____

What type of bathroom fixtures is at the facility? _____

Do employees shower at the facility? _____

If so, how many times per their shift? _____

Are there kitchen facilities? _____

If so, what type of water use fixtures is there? _____

Are there laundry facilities? _____

If so, how many loads of laundry per shift? _____

Size of washing machine (gallons of water it uses per load)? _____

Is there a meeting room where large meetings or gatherings are held? _____

If so, how often is this used and how many people attend? _____

What is the square footage of the building? _____

Will there be a dump station? _____

How many chairs/seats are there? _____

Comments _____

If your facility has been in operation in the past and the septic system is being updated or replaced, your past water use history can be used to help size the septic system if there are not going to be any changes to the facility. If this is the case, please supply the water use records for the past twelve (12) months.
